

CURRICULUM VITAE - MATTI KIVIHARJU

PERSONAL INFORMATION

Name: Matti Kiviharju
Date of Birth: 27.03.1978
Email: matti.kiviharju@i4ware.fi
Address: Ylisenkatu 6 as 31, 33710 Tampere, Finland
Phone: +358 40 8200 691
Driving License: B

PROFILE

I am an applicant with a strong ICT background, interested in Full Stack development. I have experience with ERP systems coding and automation of accounts payable. I am a focused and calm professional with an eye for detail. My work has been praised for its precision. I have run my own business since 2016, but I have been entrepreneurial even before that, with a long-standing passion for the field. My goal is to work on an interesting project where I can put my skills to good use.

I started global strategy planning with Atlassian Pty Ltd in 2004 and have now automated a global business in Atlassian Marketplace with my Jira Cloud App. I receive passive income every month without needing to do anything, which allows me time for a paid day job.

My current job description involves reading 500-2,500-page business literature from my own extensive library. I learned the English language by studying a 2,500-page Oxford dictionary with the goal of mastering the speech styles used by English-speaking business leaders (UK, US, AU, IN, and others). I do not know this book by heart, nor can I fluently pronounce all accents, but I can use it as a reference work, because for example the Indian way of saying "I reply back" is "I revert back," and in English requests for quotation it is important to understand their abbreviations.

I also have hyperthymesia (Highly Superior Autobiographical Memory), which is a rare neurological trait — an exceptionally strong autobiographical memory. I am able to remember events from my life even before preschool age as one long and detailed continuum made up of "movie-like" clips.

I currently started Pre-Seed/Seed angel investor round to get finance for success in my business: <https://www.i4ware.fi/en/investors/>

Attention! Every professional work sample can be under construction and is not in some cases tested in all devices and I do responsive UI later and I cannot promise 100 % bug free samples. Also, my doers in team make new features every week and their tasks can be incomplete.
